

WESTERN DUSTBUSTER ROAD BINDER - - - - -

FARM SERVICE

DUSTBUSTER Road Binder is a lignosulfonate product derived from lignin - - nature's glue for binding cellulose fibers to form the rigid woody structures of trees. It is made from a wood pulping process.

The binding action of lignosulfonates is a well-known characteristic that has found great utility in a variety of applications. **DUSTBUSTER** Road Binder is naturally tacky when moist and exhibits excellent adhesive action on solid particles. In certain instances, the engineering properties of some roadbed soils can actually be improved because of the wetting a dispersing characteristics of lignosulfonates.

DUSTBUSTER CONTROLS DUST - - - - -

Public Roads - Preferred product of most county road departments.

Private Drives - Will improve compaction, traction, and reduce washboard and dust.

Parking Lots - Keep dust off of parked cars and adjoining buildings.

Nurseries - Dust on plants can increase insect and disease pressure, and ruin appearance.

Vineyards - Keeps dust off vines and wine making equipment. Reduce dust around tasting rooms.

ENVIRONMENTAL SAFETY - - - - -

DUSTBUSTER is considered environmentally safe. Unlike petroleum products and salt solutions, it preserves roadside vegetation without leaching of hydrocarbons or heavy metals into surrounding soils. **DUSTBUSTER** is biodegradable, non-toxic, non-hazardous material. It may be applied around environmentally sensitive areas such as aquifers, lakes, streams recreational and residential areas.

Western Farm Service is setup with specialized spreader trucks to service the Willamette Valley (Oregon and Washington ONLY). Contact your local Western Farm Service branch for scheduling and more information.
