THE FEEDING**

Sluggo

A unique blend of iron phosphate with bait additives compressed into easy-to-use pellets. For control of snails & slugs. Can be used around wildlife and pets.

FIRST CHOICE®

©Sluggo is a registered trademark of Western Farm Service.

HOW DOES SLUGGO WORK?

Sluggo attracts snails and slugs and lures them from hiding places and plants. Once ingested (even in small amounts) the slugs and snails will stop feeding. Immediate plant protection occurs. Control is not weather sensitive – kills snails in warm or cold weather.

Slugs and snails will become less mobile and begin to die within 3-6 days. Snails/slugs often crawl away to secluded places to die, eliminating unsightly dead snails/slugs.

WHAT CROPS CAN SLUGGO BE USED ON?

Vegetables, citrus, fruit crops, berries, field crops, outdoor ornamentals, greenhouses, outdoor container nursery plants, lawns, grass grown for seed production, and commercial landscape areas.

HOW DO I APPLY SLUGGO?*

- Scatter Sluggo on the soil around or near plants to be protected.
- Apply bait evenly at 24-44 lb./acre or 1#/1,000 sq. ft. depending on infestations (use higher rates for heavy snail populations).
- Reapply Sluggo as bait is consumed.

IS SLUGGO RAINEAST?

Sluggo is a granular (pellet) formulation. The pellets have a diameter of approximately 1/16 of an inch and a length of approximately 1/8-1/4 of an inch. The pellet represents a new bait technology that assures extremely rain-fast baits. The baits remain effective even after heavy rain or sprinkling.

IS SLUGGO ENVIRONMENTALLY SAFE TO USE?

Sluggo's active ingredient, iron phosphate, is naturally found in the soil. Sluggo is a synthetic iron phosphate with a cereal grain based pellet. Toxicology data (LD rats, oral >5000 mg/kg) indicate that it can be used around pets and wildlife. Earthworms, bees, and other beneficials are not effected.

*As always read and follow label recommendations.

Available in 25 & 50 lb. Bags
